

# **Graph Theory**

- Course = 32 hours per semester
  - Tutorial = 32 hours per semester
  - Assessment:
    - Attendant = 10%
    - Homework and Class Activities = 10%
    - Mid-term = 20%
    - Final Exam= 30%
    - Final Project (Course + TP) = 30%
- 

## **Table of Contents**

### **1. Chapter 1: Introduction to Graph Theory**

- 1.1. Undirect Graph
- 1.2. Direct Graph
- 1.3. Documentation on Python for Graph Theory

### **2. Chapter 2: Graph Connectivity**

- 2.1. Connected Graph
- 2.2. Sub-Graph
- 2.3. Connected Components
- 2.4. Strongly Connected and Strongly Connected Components
- 2.5. Adjacency matrix
- 2.6. Transitive Closure
- 2.7. Eulerian and Hamiltonian path

### **3. Chapter 3: Graph and Sub-Graph Properties**

- 3.1. Stable: stable sets (independent sets)
- 3.2. Number of stabilities
- 3.3. Stability
- 3.4. Complete Graph
- 3.5. Cliques
- 3.6. Partition of vertices into cliques
- 3.7. Absorbing Set
- 3.8. Kernel
- 3.9. Grundy function
- 3.10. Cycles basis
- 3.11. Planar graph

### **4. Chapter 4: Coloring Graph**

- 4.1. Definition
- 4.2. Chromatic number properties
- 4.3. Welsh Powell's Algorithms
- 4.4. Contraction
- 4.5. Fundamental problem in product planning

- 4.6. Edge coloring
- 4.7. Line Graph

## 5. Chapter 5: Matching Graph

- 5.1. Definition
- 5.2. Edge coloring and Coupling
- 5.3. Maximal coupling
- 5.4. Maximum coupling
- 5.5. Perfect coupling
- 5.6. Maximal coupling algorithm
- 5.7. Alternating path and Increasing path (Augmenting path)

## 6. Chapter 6: Tree

- 6.1. Definition
- 6.2. Spanning Trees
- 6.3. Construction of a cycle basis of a graph
- 6.4. Weight minimum of spanning tree
- 6.5. Kruskal's Algorithm
- 6.6. Prim's Algorithm

## 7. Chapter 7: Shortest Part Algorithm

- 7.1. Introduction
- 7.2. Dijkstra's algorithm
- 7.3. Bellman Ford's algorithm
- 7.4. Floyd Warshall algorithm
